Seva Setu (■■■■■ ■■■■) — Unified Master System Architecture & Data Flow Blueprint

Standard: IEEE 1016-2009 • **Authority:** Ministry of Cooperation, GoI • **DPI Scale:** 500k Technicians, 1M Bookings/Day, 50k Peak QPS • *Single Unified Master Diagram*

SEVA SETU (□□□□□ □□□□) — UNIFIED MASTER SYSTEM ARCHITECTURE & DATA FLOW BLUEPRINT

Ministry of Cooperation, GoI • Theme: Sahakar Se Samriddhi • Standard: IEEE 1016-2009 • DPI Scale (500k Technicians, 1M Daily Bookings)

ARCHITECTURE & FLOW LEGEND:
REST HTTPS | WSS / Telemetry | Fallback Loop | Escrow Payout | PostGIS / DB

1. SOVEREIGN ACTORS & NATIONAL DPI

Citizen / Consumer (PWA / Voice)
- Submits service, selects urgency (P1-P3)
- Validates START_OTP & approves estimate
- Uploads completion feedback & 5□ rating
- Unbundled invoice & 20% NGO net subsidy

Certified Cooperative Worker
- e-Shram registered, ITI/NSDC vetted
- 10s GPS telemetry ping (50k peak QPS)
- Radar accept/decline within 30s window
- Hurdle report (puncture) & 100% net wage

PACS / Labour Cooperative
- Primary Agricultural Credit Society
- Physical tool inspection & credential badge
- Receives 1.5% statutory PMSBY cess fund
- Manages local technician guild membership

Ministry of Cooperation (BI)
- National cooperative command & audit
- Monitors real-time district deficit heatmaps
- Issues targeted PACS training cohorts
- Macro welfare & economic surplus oversight

Cooperative Hardware Store
- Local PACS-affiliated wholesale merchant
- Scans digital QR procurement pass
- Fulfills spare parts at 0% retail markup
- Direct wholesale webhook reimbursement

Sovereign DPI Interfaces
- UIDAI: Aadhaar KYC & biometric hash
- e-Shram: Unorganized worker tokenization
- NPCI UPI 2.0: Automated escrow payouts
- Police ERSS 112: Emergency SOS webhook

2. EDGE INGRESS & SECURITY

Cloudflare Edge CDN / WAF
- Anycast DNS & Global Anycast Network
- DDoS L3/L7 mitigation (100 Gbps sponge)
- TLS 1.3 termination at closest metro PoP
- PWA static asset caching & Brotli comp
- Rate-limiting against scraping & credential stuff

Load Balancer / Reverse Proxy
- Multi-zone Nginx / Traefik ingress controller
- Dynamic round-robin & least-connections
- Active TCP/HTTP liveness & readiness probes
- SSL offload & HTTP/2 connection pooling
- Zero-downtime rolling blue-green upgrades

API Gateway (FastAPI ASGI Core)
- Central asynchronous routing & request filter
- JWT RBAC validator (Citizen, Worker, Admin)
- Leaky-Bucket rate limiting (500 req/min/IP)
- WebSocket connection hub (50k active sockets)
- JSON Schema validation (Pydantic V2 engine)
- OpenTelemetry distributed tracing & APM
- Decoupled microservice request dispatch
- Automatic CORS & security headers injector
- Circuit breaker on third-party DPI integrations

GATEWAY METRICS (PEAK DPI):
- Peak Throughput: 50,035 Requests/Sec
- Median Latency (P50): 12 ms
- Tail Latency (P99): 85 ms
- Auth Overhead: < 1.8 ms (Ed25519 JWT)
- Protocol: TLS 1.3 / HTTP 2.0 / WSS

3. ENTERPRISE APPLICATION PLANE & 9-STEP EXECUTION LIFECYCLE

C_AUTH: Identity & Onboarding
DigiLocker API, UIDAI hash, Gemini 1.5 Flash OCR for ITI/NSDC certs

C_PRICE: 4-Layer Decoupled Pricing
Base labor + tools + transit + 1.5% cess; 20% NGO subsidy guardrails

C_GEO: Geospatial Triage & Dispatch
PostGIS ST_DWithin triage, Redis GEOSEARCH, candidate ranking engine

C_FALLBACK: Continuity Coordinator
30s timeout watcher, en-route vehicle puncture resolver, auto re-assign

C_PROC: B2B Material Procurement
Doorstep spare pre-auth, digital QR pass generator, wholesale partner sync

C_SOS: Safety Command & ERSS 112
10s audio buffer streamer, live telemetry broadcast, ERSS 112 webhook

C_MACRO: Ministry Intelligence, District Deficit Heatmaps & Workforce Planning Component
Aggregates real-time demand vs. supply across 750 Indian districts; automatically deploys targeted PACS training cohorts to eradicate regional trade shortages.

END-TO-END DATA FLOW & EXECUTION PIPELINE (STEPS 1 TO 9)

1 Quote & Subsidy Ingestion
Citizen inputs trade + urgency (P1-P3). C_PRICE parses 4-layer fare. Checks NGO Darpan ID, quota, and district pool to apply 20% discount (0% worker loss).

2 Proximity Match & Radar
C_GEO queries PostGIS ST_DWithin (5km radius). Filters top candidate via Redis buffer. Pushes WebSocket broadcast to Worker #1 with 30s acceptance timer.

3 Fallback Continuity Loop
If Worker #1 declines or experiences en-route puncture: C_FALLBACK logs hurdle reason, flips worker to offline, and re-escalates to Worker #2 in <3.0 seconds.

4 Doorstep START_OTP Check
Worker #2 arrives at citizen premises. Citizen inspects physical ITI badge and shares START_OTP. Gateway cryptographically verifies token before job commencement.

5 B2B Hardware QR Pass
Worker requires spare parts. Uploads photo + quote in app. Citizen pre-authorizes funds. C_PROC generates digital QR pass for pickup at PACS store at 0% markup.

6 Dual Proof-of-Work Upload
Worker uploads pre-repair damaged component photo and post-repair completed installation photo to encrypted S3 Media Vault. AI OCR checks image validity.

7 Instant Escrow Settlement
Citizen inputs END_OTP. Escrow releases split payout: 100% labor wage directly to worker account, 1.5% to PMSBY welfare cess fund, and 3.5% tech platform fee.

8 Continuous Telemetry & SOS
Active workers stream GPS pings every 10s (50k peak QPS). If emergency SOS triggered, C_SOS dials command bridge & transmits incident packet to Police 112 ERSS.

9 Macro Deficit Aggregation
Completed job telemetry and unfilled demand signals stream to D7 Deficit Ledger. C_MACRO generates hourly heatmaps for Ministry workforce intervention.

4. DISTRIBUTED PERSISTENCE & QUEUES

PostgreSQL 16 + PostGIS Spatial Cluster
- EPSG:4326 Point geometries & GiST spatial indexes
- Primary relational database for transactions
- Relational tables: users, bookings, invoices
- B2B procurement passes & subsidy ledgers
- Double-entry escrow ledger with ACID guarantees
- Read replicas for Ministry OLAP analytics
- 5-Year Storage Horizon: 2.75 TB hot relational data

Redis 7 In-Memory Cluster
- GEOADD real-time worker coordinate buffer
- Distributed Redlock concurrency locks (booking safety)
- High-speed session store & JWT token blacklist
- Leaky-bucket rate limiter counters
- District deficit pre-aggregated cache
- 3-node cluster (1 Primary + 2 In-Memory Replicas)
- Memory Sizing: 16.0 GB RAM (4.0x safety factor)

Encrypted S3 Media Vault (MinIO)
- Dual proof-of-work photographs (pre/post repair)
- Verified ITI/NSDC trade certifications & licenses
- Aadhaar & identity verification documentation
- 2 photos/job @ 200 KB compressed WebP/JPEG
- S3 Lifecycle: Hot Standard (90d) -> Glacier Flexible
- 5-Year Storage Horizon: 730 Terabytes media

Redis Streams / Message Broker
- High-throughput telemetry pipe (50k GPS pings/sec)
- Emergency SOS broadcast topics & audit events
- Worker en-route hurdle notifications
- Asynchronous webhook events for hardware merchants
- Decoupled event-driven microservice bus
- Retention: 72 hours rolling window on active streams

PERSISTENCE CAPACITY DERIVATION:
- Relational DB: 1.5 KB/booking x 1M/day = 1.5 GB/day -> 2.75 TB hot 5-yr
- S3 Media: 2 photos x 200 KB x 1M/day = 400 GB/day -> 730 TB 5-yr

NATIONAL DPI CAPACITY SIZING & RESOURCE ALLOCATION MODEL (500,000 WORKERS • 1,000,000 DAILY BOOKINGS)

ACTIVE WORKFORCE	COMPLETED JOBS	GPS TELEMETRY	NETWORK INGRESS	STORAGE (5-YEAR)	COMPUTE CLUSTER
500,000	1,000,000	50,000	140	2.75 TB / 730 TB	20 ASGI Nodes
Certified Technicians	Bookings / Day	Pings / Sec (QPS)	Mbps Continuous Peak	Relational DB / S3 Vault	4 vCPU / 16 GB RAM each
200,000 Peak Concurrent On-Duty	35 QPS Peak Transactional Surge	200k workers / 10s x 2.5 surge	100 Mbps GPS + 40 Mbps API Payload	PostGIS + 1.4GB Dual Proof Photos	Kubernetes HPA Target: 65% CPU

1. Modular Subsystem Catalog & Enterprise Interface Matrix

Detailed technical breakdown of the eight modular components illustrated in the master diagram, including internal processing engines, protocol standards, and persistent data dependencies.

Component ID	Subsystem Name	Core Architectural Responsibility	Boundary Interfaces & Protocols	Internal Micro-Engines	Persistence & Storage

C_INGRESS	**Edge Ingress & API Gateway**	TLS 1.3 edge termination, DDoS L3/L7 mitigation, JWT RBAC validation, leaky bucket rate limiting, WebSocket connection pool.	`HTTPS / WSS`
			`Port 443`
			`REST + WebSockets`
				• Traefik Ingress Router
				• FastAPI ASGI Core
				• Leaky-Bucket Filter
					Redis 7 (Rate limit counters & Token blacklists)

C_AUTH	**Identity & Verification**	Aadhaar KYC authentication, e-Shram unorganized worker registry attestation, ITI/NSDC certificate verification via AI OCR.	`REST: POST /api/v1/auth/kyc` `DigiLocker API`	• Gemini 1.5 Flash OCR • Aadhaar SHA-256 Engine • e-Shram Adapter	PostgreSQL users table, S3 Vault (KYC Documents)
C_GEO	**Geospatial Triage & Dispatch**	High-frequency worker GPS ingestion (50k QPS), PostGIS proximity queries, multi-parameter triage ranking, WebSocket radar broadcast.	`REST: POST /api/v1/dispatch/*` `WSS: /ws/telemetry`	• PostGIS ST_DWithin • Redis GEOSEARCH Buffer • Scoring Matrix Engine	PostGIS (EPSG:4326), Redis 7 (Live coordinate cache)
C_FALLBACK	**Continuity & Hurdle Coordinator**	Zero-downtime worker re-assignment upon rejection, timeout (30s), or en-route mechanical hurdle (vehicle puncture). Re-escalates in <3s.	`REST: POST /api/v1/dispatch/hurdle`	• Rejection State Engine • En-Route Hurdle Resolver • Guild Re-Escalator	Redis Distributed Redlock, PostgreSQL rejections ledger
C_PRICE	**Decoupled 4-Layer Pricing**	Unbundled fair fare computation (Base labor + Toolkit + Transit + 1.5% PMSBY cess). 20% NGO subsidy guardrail manager (0% worker loss).	`REST: POST /api/v1/pricing/quote`	• Unbundled Rate Engine • Seva Subsidy Manager • Monthly Quota Guardrail	PostgreSQL invoices, subsidy_ledger
C_PROC	**B2B Material Procurement**	On-site spare part pre-authorization, cryptographic digital QR procurement pass generation, PACS hardware store fulfillment sync at 0% markup.	`REST: POST /api/v1/procurement/*`	• Spare Pre-Auth Engine • QR Pass Generator • Wholesale Margin Auditor	PostgreSQL procurement_passes, S3 Media Vault
C_SOS	**Safety Command & ERSS 112**	Active worker/citizen telemetry compilation, 10-second ambient audio buffer streaming, automated Police 112 ERSS webhook transmission.	`REST: POST /api/v1/safety/emergency` `ERSS 112 Webhook`	• Incident Telemetry Packager • Telephony Bridge Adapter • ERSS 112 Client	Redis Streams (SOS Topic), PostgreSQL incidents
C_MACRO	**Ministry Intelligence & Analytics**	District deficit heatmap aggregation across 750 districts, PACS skill gap detection, automated targeted training cohort deployment orders.	`REST: GET /api/v1/analytics/heatmaps`	• Spatial Deficit Engine • PACS Cohort Planner • Welfare Fund Auditor	PostGIS Read Replicas, D7 Deficit Ledger

2. End-to-End Data Flow Execution Guide (DFD Synthesis)

Synthesized documentation of the 9 execution steps illustrated in the master diagram, tracing data transformations from initial citizen intent to final institutional audit.

Step #	Lifecycle Stage	Initiating Entity & Ingress API	Subsystem Transformation & Algorithms	Data Stores Read / Written	Output Payload / Next State
01	**Quote & Subsidy Ingestion**	`Citizen via PWA` `POST /api/v1/orders/quote`	C_PRICE calculates 4-layer fare. Checks NGO Darpan ID, verifies district subsidy reserve liquidity, applies 20% net discount (reimbursed via commercial pool).	Read: Rate Cards Write: invoices, subsidy_ledger	ORDER_PENDING_MATCH Transparent unbundled quote returned.
02	**Proximity Radar & Broadcast**	`Gateway to C_GEO` `Internal Async Event`	C_GEO queries PostGIS ST_DWithin (5km radius). Ranks active workers via composite score (proximity, rating, trade cert). Sends WebSocket alert with 30s timer.	Read: Redis GEO buffer, PostGIS Write: dispatch_broadcasts	BROADCASTING_RADAR Worker #1 phone vibrates with task details.
03	**Fallback & Continuity Loop**	`Worker #1 (Decline/Timeout/Hurdle)` `POST /api/v1/dispatch/hurdle`	C_FALLBACK logs hurdle (e.g. vehicle puncture), flips Worker #1 to maintenance, queries candidate #2, acquires Redis Redlock, and transfers job in <3s.	Write: hurdles_log Update: Redis Redlock key	RE_ESCALATED_EN_ROUTE Worker #2 dispatched; citizen sees updated ETA.
04	**Doorstep START_OTP Check**	`Worker #2 at Doorstep` `POST /api/v1/orders/start`	Citizen visually verifies ITI credential badge and shares cryptographic START_OTP. Gateway validates hash to confirm physical arrival.	Read/Write: bookings status	IN_PROGRESS Service execution begins timer.
05	**B2B Hardware QR Pass**	`Worker Quote + Citizen Pre-Auth` `POST /api/v1/procurement/pre-auth`	Worker uploads spare part quote. Citizen pre-approves. C_PROC issues cryptographic QR pass. PACS hardware merchant scans QR and fulfills at wholesale price.	Write: procurement_passes Write: S3 Media Vault (Part photo)	MATERIAL_PROCURED 0% retail markup; wholesaler paid directly.
06	**Dual Proof-of-Work Verification**	`Worker Camera Upload` `POST /api/v1/orders/proof`	Worker uploads pre-repair damaged photo and post-repair completed photo. Gemini 1.5 Flash OCR confirms trade validity and part replacement.	Write: S3 Encrypted Media Vault Write: photo_proofs ledger	PENDING_END_OTP Citizen notified to inspect completed work.
07	**Instant Escrow Split Settlement**	`Citizen Enters END_OTP` `POST /api/v1/orders/complete`	NPCI UPI escrow releases automated split payout: 100% labor wage directly to worker account, 1.5% to PMSBY federation fund, 3.5% tech platform maintenance fee.	Write: escrow_transactions Write: pmsby_ledger	COMPLETED_SETTLED Instant bank SMS received by worker.
08	**Continuous Telemetry & SOS**	`Worker Background GPS` `WSS /ws/telemetry`	Worker device pings GPS every 10s into Redis Streams (50k QPS peak). Emergency SOS button broadcasts 10s audio + coordinates to Police 112 ERSS webhook.	Write: Redis Streams Write: safety_incidents	TELEMETRY_RECORDED Police bridge open; family SMS dispatched.
09	**Macro Deficit Heatmap Stream**	`Settled Booking Event` `Kafka / Redis Stream`	C_MACRO aggregates completed job coordinates, pricing, and unmet demand. Generates hourly deficit heatmaps across 750 districts to trigger PACS training.	Write: D7 National Deficit Ledger Materialized Views	MACRO_AUDITED Ministry dashboard updated in real-time.

3. Quantitative Capacity Modeling & Infrastructure Provisioning

Formal mathematical derivations supporting the capacity limits annotated on the master blueprint, sizing Seva Setu from city pilot to a nationwide Digital Public Infrastructure (DPI).

Resource Dimension	Baseline Operational Parameters	Mathematical Derivation & Governing Formula	Peak Operational Limit	Infrastructure Provisioning Specification

Geospatial Ingestion Throughput	500,000 Registered Workers
	200,000 Concurrent Active
	10s GPS ping interval
		`QPS_avg = 200,000 / 10 = 20,000 QPS`
		`Surge factor = 2.5x (weather / rush surges)`
		`QPS_peak = 20,000 * 2.5 = 50,000 QPS`
			50,000 GPS Pings / Sec	Redis Streams buffer + 42 dedicated ASGI worker cores with async event loop.

Transactional Booking Ingestion	1,000,000 Bookings / Day
	86,400 seconds / day
	3.0x diurnal peak surge
		`QPS_avg = 1,000,000 / 86,400 = 11.57 QPS`
		`Diurnal surge multiplier = 3.0x`
		`QPS_peak = 11.57 * 3.0 = 35 QPS`
			35 Bookings / Sec
			(2,000 QPS with status polling)
				FastAPI ASGI nodes with connection pooling and PostgreSQL read replicas.

Network Bandwidth (Ingress / Egress)	GPS payload = 250 bytes
	API payload = 2.5 KB avg
	WebSocket keep-alives
		`BW_GPS = 50,000 * 250 B = 12.5 MB/s = 100 Mbps`
		`BW_API = 2,000 * 2.5 KB = 5.0 MB/s = 40 Mbps`
		`BW_Total = 100 + 40 = 140 Mbps`
			140 Mbps Continuous Peak	Dual redundant 1 Gbps fiber uplinks via Cloudflare Edge WAF.

Relational Storage (PostgreSQL + PostGIS)	Booking record = 1,000 bytes
	Invoice record = 500 bytes
	GiST index overhead = 1.5x
		`Daily = 1,000,000 * 1.5 KB = 1.5 GB/day`
		`Annual (indexed) = 1.5 GB * 365 * 1.5 = 821 GB`
		`5-Year Gross = 821 GB * 5 = 4.1 TB`
			2.75 TB Active Hot Storage
			(with 18-month cold archiving)
				AWS RDS PostgreSQL 16 Multi-AZ with Provisioned IOPS SSDs (io2, 10,000 IOPS).

Object Media Storage (Encrypted S3)	2 photos/job (pre/post)
	200 KB/photo (WebP)
	KYC documents & trade certs
		`Daily = 1,000,000 * 2 * 200 KB = 400 GB/day`
		`Annual = 400 GB * 365 = 146 TB/year`
		`5-Year Horizon = 146 TB * 5 = 730 TB`
			730 Terabytes Compressed	S3 Standard (90 days) transitioning to S3 Glacier Flexible Retrieval for legal audit.

In-Memory Cache (Redis 7 Cluster)	200k workers @ 64 bytes
	50k active booking sessions
	2M active session JWTs
		`Spatial = 12.8 MB; Sessions = 75 MB`
		`JWT Blacklist = 1.0 GB; Deficit = 50 MB`
		`Raw RAM = 1.16 GB x 4.0 safety factor = 4.64 GB`
			16.0 GB Cluster RAM	3-Node Redis 7 Cluster (1 Primary + 2 In-Memory Replicas) with AOF persistence.

ASGI Compute Cluster (Kubernetes)	FastAPI / uvloop efficiency
	1,200 non-blocking QPS/core
	HPA target: 65% CPU
		`Cores_GPS = 50,000 / 1,200 = 42 vCPUs`
		`Cores_API = 16 vCPUs (complex DB & math)`
		`Total = 58 vCPUs -> 20 x (4 vCPU / 16 GB RAM)`
			20 ASGI Nodes (80 vCPUs)	Kubernetes EKS cluster with Horizontal Pod Autoscaler scaling from 8 to 24 nodes.
